

# GoFilter

Liquid  
Cleaning  
Systems

Clean Fuel,  
Always Ready.

GOF 1800  
exclusive

\* Retrofit Fuel Cleaning Systems  
for Petrol and Diesel Boats.

# Your Benefits

## \* Effective Cleaning:

Cleans already contaminated fuel in the shortest possible time

## \* High performance:

Prevents deposits, sludge and bacteria formation - thanks to 0.5 µm filtration with our exclusive products.

## \* Permanently active:

Cleaning at the touch of a button, even directly after refueling

## \* Easy to use:

Programming and monitoring via external touch display

## \* Flexible:

Suitable for both large and small tanks, easy to retrofit

## \* Reliable:

Run once a week - even when not in use for longer periods or during your absence

## \* Always clean fuel:

Avoids failures and ensures the best quality

GOF 1800 exclusive

GOF 1800 Turbine

GOF 1800

**GoFilter** cleans the entire tank contents at regular intervals in an automatic, multi-stage process. Water and pollutants are removed mechanically. Fuel additives only slow down the growth of bacteria and spores, but cannot prevent it completely.

# GOF 1800 exclusive – Fuel purification system for diesel

Clean fuel. Maximum engine power. Full safety.

## Highlights and advantages

- High-performance system with a filter capacity of up to 600 l/h (160 GPH) - suitable for tank sizes up to 2000 l (530 gallons)
- Water separation efficiency of over 98 % and filter fineness of 0.5 µm - reliably removes bacteria and dirt
- Automated control thanks to digital timer for weekly programs or start after refuelling
- Intelligent monitoring of the filter contamination level and the tightness of the system - with automatic shutdown and warning message
- User-friendly external touch display, can be installed in the driver's cab or at another location
- Management of up to three tanks with just one system
- Simple retrofitting through integration into existing fuel lines (supply and return)

## Functionality

The system combines powerful Marco s.p.a. fuel pumps with the patented micfil ultra-fine filter. This swirls the fuel in the tank, effectively binding and removing water and dirt particles - far better than pure engine filtration during operation.

The result: a permanently clean tank, maximum reliability of the fuel supply and protection against expensive engine damage.

## Installation and operation

It is simply installed in the existing fuel line system. Electronically controlled 3-way valves create a separate circuit for the cleaning cycle. Sophisticated programming monitors safety-relevant functions and enables the system to be controlled and monitored. This keeps the fuel clean - even directly after refueling.

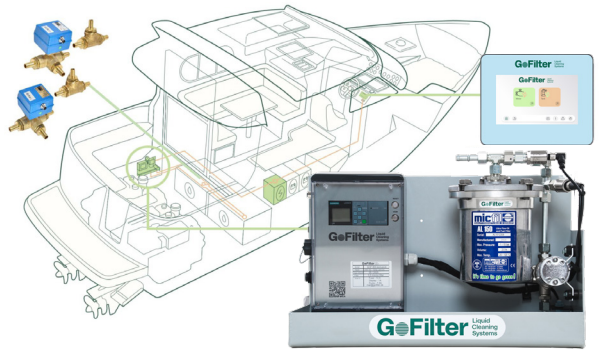

## Conclusion

The GOF 1800 exclusive ensures permanently clean diesel fuel, prevents contamination and significantly reduces the risk of engine damage. More reliability, lower maintenance costs and a longer service life for your engine.

# Fits perfectly: Fuel cleaning with a system.

The compact fuel purification system also fits safely into smaller motorboats and is easy to install by professionals. Programming and control are carried out on the intuitive control panel in the cockpit

On request, we can customize the system to your needs. Find out more now on our website.

Modern design meets smart function.  
How to control your filter system efficiently - simply, quickly and safely.

## Intuitive operation - Full control

Select your cleaning mode directly:

**Engine cleaning** - Removes residues in the engine system, protects performance and extends service life

**Tank cleaning** - thoroughly cleans the fuel in the tank - for less maintenance and maximum operational safety

Intuitive operation included: automatic control, minimum effort, maximum precision as with all GoFilter systems.
