

water separator

ultrafine filter 0.5 μm

GOF 3000 exclusive plus (1080l/h , 285 GHP)

Fuel Polishing System Always Clean Fuel Always Safe Engines

How it works:

Our Fuel Polishing System continuously cleans diesel fuel while the vessel is in standby.

Water, sludge and bacteria are removed before they reach your engine.

The result:

Reliable engines, clean tanks and maximum safety on board.

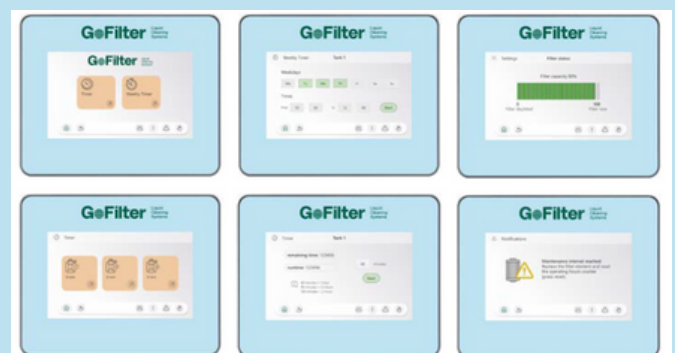

GOF 800 turbine with 2 μm filter (300l/h , 80GHP)

- Continuous filtration during standby
- External touch display for filter status
- Tested bacteria filtration: 2 μm & 0.5 μm
- Easy retrofit installation
- Water separator with ultra-fine filter, turbine - and Separ filter

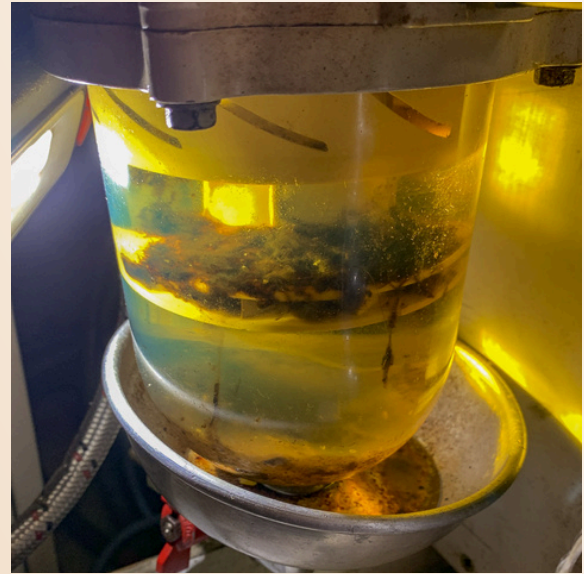

GOF 1800 with Separ 10 μm filter (600l/h , 160GHP)

mail@gofilter.de

- No water in your fuel
- Clean tanks at all times
- No engine failure during docking
- No clogged filters or injectors
- No additives required
- No manual tank cleaning
- Protects the injection system
- Prevents bacterial growth

Diesel bacterial and water already in the pre filter

Contaminated fuel tank

**Why fuel polishing is essential.
Just like a fire safety system,
clean fuel is critical for your vessel.**
